

NOTICE TO FISHERMEN

Surveys to start May 16, 2018

Estimated duration 3-4 weeks (weather permitting)

Geophysical Survey of the Bay State Wind Project

In May 2018, Bay State Wind will conduct geophysical surveys within the offshore lease and along two potential export cable routes. These surveys will be done using three different survey contractors.

Fugro's Survey aboard *Westerly*

Westerly will survey the shallow water approaches to Brayton Point in Mount Hope Bay. In addition, *Westerly* will also collect data within the Sakonnet River such as data in gaps that remained after last year's efforts to avoid fixed fishing gear. *Westerly* will operate during daylight hours only and will be working for ~1 month (weather permitting).

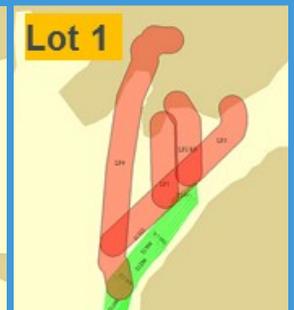

Fugro's Vessel - *Westerly*

DAYLIGHT OPERATIONS ONLY
